

## Gyr A Monoclonal Antibody (7F11) (N-terminal domain of Gyr A)

### Product Description (Product Numbers #7F001, 7F005 and 7F100)

Gyr A antibody 7F11 is an IgG<sub>2b</sub> monoclonal produced from tissue culture supernatant. It is purified on a Protein A column (Ey *et al.*, 1978) using the low-salt method. The antibody is supplied at a concentration requiring ~1:1000 dilution for Western blotting.

**For *in vitro* laboratory research use only.**

### Storage Buffer

Phosphate Buffered Saline (PBS) pH 7.2  
Dilutions should be performed in PBS.  
Store at -20°C (stable for at least 12 months undiluted).

### Quality Control

The antibody is purified to >95% purity as judged by SDS-polyacrylamide gel electrophoresis.

Endonuclease assay: 0.5µg Supercoiled pBR322 incubated with the antibody at a concentration range of 0.01µg/ml-100µg/ml for 1 hour at 37°C in the presence of 1 mM ATP, shows no detectable conversion of superhelical DNA to either open circular or linear forms when assayed by agarose gel electrophoresis.

Exonuclease assay: 1µg linear pBR322 was incubated with the antibody at a range of 0.01µg/ml-10µg/ml for 30 minutes at 37°C before being religated and transformed into competent JM109 cells. There was no detectable reduction in transformation efficiency.
